Academic Positions

2022– Associate Economist (Postdoc), St. Louis Federal Reserve

2022– Visiting Scholar (Postdoc), Washington University in St. Louis

Education

2022 MASSACHUSETTS INSTITUTE OF TECHNOLOGY
Ph.D. in Economics

2015 STANFORD UNIVERSITY
B.A. with Honors in Economics, Secondary Major in Math

Fields

Primary: Development and Macroeconomics

Secondary: Applied Econometrics

Teaching Experience

2021, 2022 14.76 - Firms, Markets, Trade, and Growth (Undergraduate and Master's Level)

2019, 2022 14.772 - Development Economics: Macroeconomic Issues (PhD Level)

2018 14.771 - Development Economics: Microeconomic Issues (PhD Level)

2018 14.75 - Political Economy and Development (Undergraduate Level)

Fellowships, Honors, and Awards

2019 Bank of Mexico Summer Research Program

2019–2020 Jerry A. Hausman Graduate Dissertation Fellowship

2017 George and Obie Shultz Fund

2016–2020 NSF Graduate Research Fellowship

2015 Sterling Award for Scholastic Achievement

2015 Firestone Medal for Excellence in Undergraduate Research

2015 Kennedy Honors Thesis Prize for Social Sciences

Professional Activities

Presentations: Society for Economic Dynamics Annual Meeting (2023), Barcelona Summer Forum (2023), KU Leuven Summer Event (2023), University of Kent Workshop on Firm Dynamics (2023), Bank of Mexico Conference on Financial Stability (2019)

Referee for Journal of Development Economics

Organizer of MIT Development Tea (2018–2022)

Co-Founder of EconREFs (Group devoted to improving graduate student mental health and well-being; 2018–2021)

Co-Organizer of MIT Application Assistance and Mentoring Program (Program for prospective PhD applicants from underrepresented backgrounds; 2020–2021)

Publications

"Childhood Environment and Gender Gaps in Adulthood" (with Raj Chetty, Nathan Hendren, Frina Lin, and Ben Scuderi). 2016. *American Economic Review Papers and Proceedings* 106(5): 282-88.

Working Papers

"A Q-Theory of Banks" (with Juliane Begenau, Saki Bigio, and Matías Vieyra). *Under Revision for Review of Economic Studies*

Abstract: We propose a dynamic bank theory with a delayed loss recognition mechanism and a regulatory capital constraint at its core. The estimated model matches four facts about banks' Tobin's Q that summarize bank leverage dynamics. (1) Book and market equity values diverge, especially during crises; (2) Tobin's Q predicts future bank profitability; (3) neither book nor market leverage constraints are binding for most banks; (4) bank leverage and Tobin's Q are mean reverting but highly persistent. We examine a counterfactual experiment where different accounting rules produce a novel policy tradeoff.

"How Much Should We Trust Regional-Exposure Designs?" (with Karthik Sastry)

Abstract: Many prominent studies in macroeconomics, labor, and trade use panel data on regions to identify the local effects of aggregate shocks. These studies construct regional-exposure instruments as an observed aggregate shock times an observed regional exposure to that shock. We argue that the most economically plausible source of identification in these settings is uncorrelatedness of observed and unobserved aggregate shocks. Even when the regression estimator is consistent, we show that inference is complicated by cross-regional residual correlations induced by unobserved aggregate shocks. We suggest two-way clustering, two-way heteroskedasticity- and autocorrelation-consistent standard errors, and randomization inference as options to solve this inference problem. We also develop a feasible optimal instrument to improve efficiency. In an application to the estimation of regional fiscal multipliers, we show that the standard practice of clustering by region generates confidence intervals that are too small. When we construct confidence intervals with robust methods, we can no longer reject multipliers close to zero. The feasible optimal instrument more than doubles statistical power; however, we still cannot reject

low multipliers. Our results underscore that the precision promised by regional data may disappear with correct inference.

“Misallocation and the Selection Channel”

Abstract: An important determinant of aggregate productivity is the selection channel: the process by which less efficient firms are driven out of the market by more efficient firms. Conventional wisdom suggests that markets in developing countries are more sclerotic, allowing inefficient firms to survive that would have exited in a developed country. I provide a tractable model to examine the importance of the selection channel, and show how to calibrate it to panel data on firms. I use this model to show that the effect of the selection channel on aggregate productivity is approximately equal to the average difference in log productivity between stayers and exiters, which can be measured easily in firm panel data. Results for Indonesia, Spain, Chile, and Colombia suggest that Indonesia could raise its aggregate productivity by roughly 30% if its firm exit process became as selective as Spain’s. However, cross-country estimates suggest that the selection channel is not an important explanation for cross-country differences in output per capita.

“Consolidation on Aisle Five: Effects of Mergers in Consumer Packaged Goods” (with Anthony Yu)

Abstract: We study the effects of mergers in the consumer packaged goods industry, a sector that comprises approximately one-tenth of GDP in the United States. We match data on all recorded mergers between 2006 and 2017 with retail scanner data. In comparison to prior work, which focuses on case studies of large mergers, our approach allows us to estimate the effect of a typical merger. Most mergers we study are highly asymmetric (a large firm acquires a much smaller firm) and rarely challenged. By studying these mergers, we provide new evidence on the effects of mergers on prices, quantities, product availability, and exit. On average, mergers lead to a short-run price effect at the target of 1% and declines in total revenue of 7%. These average effects hide substantial heterogeneity across different groups of mergers. Our results highlight the importance of effects not captured in the canonical model, such as effects on consumer surplus through changes in product availability, and through inefficient firms’ capital being repurposed by more productive acquirors.

Work in Progress

“Measuring Misallocation with RCTs” (with David Hughes)

“Financial Frictions with Risk, Irreversible Capital, and Default” (with Francisco Buera, Yongseok Shin, and Kuldeep Singh)

“Estimating Trends in Intergenerational Mobility by Race Using Multiple Data Sources”
